

How to... Create a Lego Model Manual for Therapy

1. Think about the model you would like to create and tailor it to specific abilities. Try starting with a tower and then move up to other models with harder steps or more parts.

2. Display all the Lego that will be needed when building your specific model. You can do this by creating a section of parts needed and including a photo of the pieces.

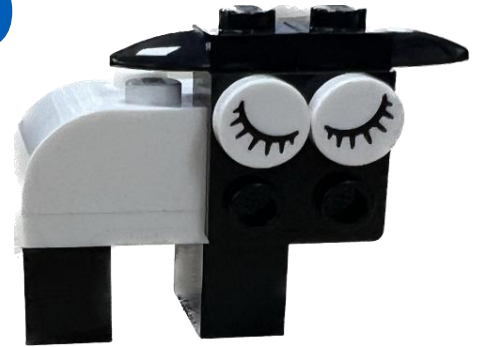

3. Create a step-by-step guide showing each step when creating your model. You can do this by showing examples of each step and which Lego pieces as well as how many are required in the step with pictures of each piece added. (see example above of our Lego sheep manual)

Lego Modelling

Manual- Sheep

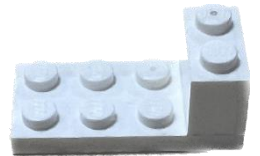

Parts you will need:

1

2

3

4

5

6

7

How to model-

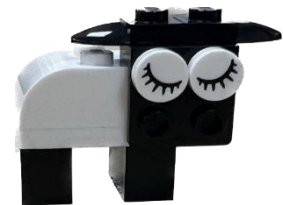

Step-by-step

guide

Step 1

Build Lego model and take picture of it completed

Step 2

Remove one Lego block and take a photo

Step 3

Remove another Lego block and take a photo

Step 4

Repeat steps of removing blocks and take a photo after removing each piece until you are left with the model completely deconstructed.

Step 5

Take picture of all Lego pieces needed for model
